Front & Rear Suspensions

HEPI's Front and Rear Suspensions are engineered for extended lifespans and durability in harsh conditions. With decades of experience servicing CAT models from the 777 to the 798, our solutions are trusted worldwide for their reliability and performance. Utilizing proprietary tooling, repair procedures, and available in-house chrome plating (region-specific), HEPI ensures rapid turnaround times and long-lasting rebuilds. Whether you're looking for service exchange options, new stock, or repair and return services, HEPI has a solution tailored to your needs.

- Decades of experience with CAT models from the 777 to the 798.
- Extended lifespan through engineering specifications tailored for superior performance.
- Superior quality with available in-house chrome plating (region-specific).
- Durable and reliable in harsh operating conditions, minimizing downtime.
- Flexible options, including service exchange, new stock, and repair and return services.

Built for Performance and Durability

HEPI's Front and Rear Suspensions are designed to keep your mobile mining equipment operating at peak performance. With expertise spanning CAT models from the 777 to the 798, HEPI provides solutions trusted by customers worldwide. Key features include:

- **Extended Lifespan:** Inspected, repaired, and remanufactured to engineering specifications for reliability.
- **Available In-House Chrome Plating:** Region-specific chrome plating options ensure superior durability in the most demanding conditions.
- **Proprietary Tooling and Repair Procedures:** Enable rapid turnaround times for minimized equipment downtime.
- **Flexible Solutions:** Choose from service exchange programs, new stock, or repair and return services to suit your operational requirements. With HEPI's suspension solutions, you get the quality, reliability, and service you need to maximize equipment performance and reduce total cost of ownership.
